Sequence 18, Application US/0909903

Patent No. US20020052031A1

GENERAL INFORMATION:
APPLICANT: Waterman, Michael R.
APPLICANT: Waterman, Michael R.
APPLICANT: Waterman, Michael R.
TITLE OF INVENTION: MYCOBacterium tuberculosis CYP51 POLYPEPTIDES AND TITLE OF INVENTION: NUCLEIC ACIDS AND THERAPEUTIC AND SCREENING METHODS

TITLE OF INVENTION: RELATING TO SAME
FILE REFERENCE: Attorney Docket No. US20020052031A1 1242-17

CURRENT APPLICATION (NUMBER: US/09/909,903

CURRENT FILING DATE: 2001-07-20

NUMBER OF SEQ ID NO.18

SEQ ID NO.18

LENCTH: 503

TYPE: PRT
ORGANISM: Homo sapiens

Acts on retinoids, including all-trans-retinoic acid (RA) and its stereolsomer 9-cis-RA. Capable of both 4-hydroxylation and 18-hydroxylation. Responsible for generation of several hydroxylated forms of RA, including 4-OH-RA, 4-oxo-RA, AND 18-OH-RA. SUBCELLULAR LOCATION: Membrane-bound. Endoplasmic reticulum. INDUCTION: BY RETINOIC ACID.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   European Bioinformatics Institute.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Martinez-Ceballos E., Burdsal C.A.;
Submitted (SEP-1999) to the EMBL/GenBank/DDBJ databases.
-i- FUNCTION: Plays a key role in retinoic acid metabolism. Appears be involved in the specific inactivation of all-trans-RA.
Responsible for generation of several hydroxylated forms of RA,
including 4-0H-RA, 4-oxo-RA, and 18-0H-RA.
-i- SUBCELLULAR LOCATION: Membrane-bound. Endoplasmic reticulum.
-i- DEVELOPMENTAL STAGE: Expressed at stage 7 its expression
decreases in the anterior part of the embryo. From stage 7-10 it
expression is restricted to the dorsal folds of the neural tube.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EMBL;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright.
